Master's degree Social Sciences Corporate Communication and Social Media

UFR de Sciences Humaines et Sociales (SHS)

Master's degree M1 M2

TO GET THERE

This Master's degree is for students of sociology and human and social sciences (information-communication, history, geography, etc.). For M1: a Licence degree or equivalent (180 ECTS), for M2: the first year of a Master's degree (M1) or equivalent. Candidates are expected to have a good level and to be motivated by a career in communications.

ACQUIRED SKILLS

As well as using communication techniques and tools, the aim of the course is to train students to be able to draw on their mastery of the social sciences to develop innovative communication strategies on their own and to reflect on their practices.

The course also aims to ensure that students know how to implement communication strategies in line with a company's overall policy, and that they master the conceptual foundations of communication in relation to their operational context.

Lastly, the course aims to make students aware of the major challenges posed by digital technology, so that they are in a position to face the current changes in the world of communication with confidence.

YOUR FUTURE CAREER

This degree enables you to start out as a communications officer in a company (in the communications department, a support role or in an operational department) or as a project manager in a communications consultancy. It enables you to progress rapidly to positions of responsibility in the world of communications.

BENEFITS OF THE PROGRAM

1- Work-study training The course is offered on a work-study basis from the first year, at the university (2 days a week) and in a company (3 days a week), in order to give students professional experience. Depending on their age, students sign an apprenticeship or professional training contract (a 24-month contract for the first year and a 12-month contract for those entering directly into the second year). 2- Emphasis on digital technology Digital technology now plays an essential role in the world of communication, and the course places particular emphasis on this aspect through the profile of the teaching staff and the nature of the teaching. 3- Learning through research Accompanied by lecturer-researchers, students learn by carrying out an original investigation into communication and/or digital technology (research dissertation).
