D'URBANISME
DE
PARIS**

UNIVERSITÉ PARIS-EST CRÉTEIL
UNIVERSITÉ GUSTAVE EIFFEL

Master's degree Urban Planning and Development Integrated Urban Development: Strategies and Projects

École d'Urbanisme de Paris (EUP)

Master's degree M2

TO GET THERE

Students with at least an M1, from a wide range of professional and educational backgrounds (urban planning, economic development, political science, architecture, geography, law, engineering, etc.).

ACQUIRED SKILLS

1. Contextualise, organise space and solve problems in integrated urban projects.
2. Work in project mode within complex stakeholder systems;
3. Integrate social, environmental and economic issues

YOUR FUTURE CAREER

The Integrated Urban Development course aims to prepare graduates to enter the professional world immediately after the Master's degree.

Professional opportunities include: research officer, mission manager, or operations manager in urban planning, development, equipment, local development, economic development, real estate, Europe, strategy and partnerships, inter-territoriality, integration, urban policy or urban renewal, whether in the public sector (local authorities), the para-public sector (semi-public companies, local public companies; social housing landlords, etc.) or the private sector (design officers, urban operators, etc.).

Professional development through research, for example in the form of a PhD backed by an agreement with a company or public body, is perfectly feasible and compatible with this course. The teaching team will ensure that such vocations or skills are identified and supported.

BENEFITS OF THE PROGRAM

The course trains urban planning professionals who are capable of taking up the challenge of intersectoral and inter-institutional approaches and interventions that account for the social, economic and environmental challenges of sustainable urban development. This is a work/study course focusing on learning methods that combine university knowledge, research and professional experience. This approach is all the more important as the current context calls for innovations that challenge both urban research and daily inventiveness. Each year, the course focuses on an emerging, little-explored theme that calls for the development of new knowledge and expertise that the labour market will value (e.g. approaches to vacant urban spaces; industrial development and environmental transition of territories; productive cities). This is translated through a research/action workshop, an overseas study experience and a day of study dedicated to the theme.
