Master's degree Social and Solidarity Economics Healthcare, Welfare and Treatment Pathways

Institut Francilien d'ingénierie des Services (IFIS)

Master M2

TO GET THERE

The Master's in Healthcare, Welfare and Treatment Pathways is primarily open to students who have completed a first-year Master's in the field of health or healthcare and social welfare. It is also open as a lifelong learning course to professionals in this sector who have management experience and wish to further their skills or take on new responsibilities.

ACQUIRED SKILLS

The course is designed to enable students to develop the necessary skills for administrative functions in a healthcare service or establishment, or managerial roles in a healthcare and social welfare organisation.

These skills cover both management and the legal and regulatory requirements of careers in health and the healthcare and social welfare sector.

YOUR FUTURE CAREER

The Master's degree focuses on professional skills and enables students to enter working life directly in positions of management and responsibility in health or social welfare establishments or services. They may also be involved in coordinating treatment pathways.

Our graduates go on to become nursing home directors, HR managers, quality managers, project managers, coordinators, etc.

BENEFITS OF THE PROGRAM

The work-study programme allows students to complement their theoretical knowledge with practical training and an initial experience that will facilitate their professional integration. Throughout the course, students are supported by faculty and professionals employed in healthcare and social welfare organisations. Teaching is based on numerous practical case studies and group work.
